Donlin Gold! Found jobs! Mom's good thing for the unemployed with family to support. I'm single and I worked for the mine as sorter, packer, and helper for Driller and know a lot of others who were fired from that. but I didn't really know how the mine was going to be run. I found out its going to be a pit mine, but fresh water is used with chemicals like acid to separate the gold from other minerals and I'll take a whole lot of water to get the gold out, using water rather from under ground creeks, with a ~~river~~ river car we or will last for 23 yrs. I'm sure the pit itself will be past the water ground water supply, and once the gold is out what next clean up? like I say I'm simple I have no kids of my own I'm ~~not~~ talking for your kids, kids.

James Morgan
